

Ubiquiti Full-Stack Test Assignment

Technical requirements

- Language: TypeScript
- Framework: React
- Backend: Node

User Stories to Consider/Implement

It's not mandatory to implement all of the given user stories. Use your own judgment to deliver the best user experience and a combination of user stories that - in your opinion - make sense and showcase your capabilities in the time you have available.

- ★ (required): I as a user can create to-do items, such as a grocery list.
- I as a user can collaborate in real-time with other users - so that we can (for example) edit our family shopping-list together.
- I as a user can be sure that my to-dos will be persisted so that important information is not lost when the server restarts.
- I as a user can keep editing the list even when I lose internet connection, and can expect it to sync up with BE as I regain connection.
- I as a user can mark to-do items as “done” - so that I can avoid clutter and focus on things that are still pending.
- I as a user can change the order of tasks via drag & drop.
- I as a user can add sub-tasks to my to-do items - so that I could make logical groups of tasks and see their overall progress.

- I as a user can specify cost/price for a task or a subtask - so that I can track my expenses/project cost.
- I as a user can add sub-descriptions of tasks in Markdown and view them as rich text while I'm not editing the descriptions.
- I as a user can share my to-do list via a unique link - so that others can view or collaborate on it.

Notes

- This test is meant to evaluate both back-end and front-end skills. In order to do that, we need to see what you're capable of building yourself. It's all right to use libraries that make your life easier, but please avoid anything that handles the core challenge for you.
- Please send a link to a hosted application and the source repository.
- Mark the repository as private after it has been reviewed.
- In your README, list which stories you implemented.

If you have any questions about the assignment or the hand-off process please reach out to simon.perstorper@ui.com.
